

Comments 1. 1399; Bets. 51.

2. pecked band around bill on both faces seems to predate grinding. Pecking extends over whole of bill edge, but is more ground out on side edges. Just below pecking, ground surface is a lighter colour than rest of ground area. On front face, the junction between the 2 shades is more distinct than on back. This is presumably a lighting stain. Ground all over.

3. Not in Atkins & Jackson 1978.
